Top Answer Wiki User November 28, 2013 824PM 20131128 202418 on the battery indicator, it shows the clock battery indicatorAll Rights Reserved. The material on this site can not be reproduced, distributed, transmitted, cached or otherwise used, except with prior written permission of Multiply. When outdoor unit is right next to the indoor unit, it will register the temp. When it is moved 6 feet away the temp disappears within a minute or two.This unit transmits a signal 433 MHz signal approximately every. 3 minutes, and after so many years the sender units RF sectionelectronics just goes out or no longer function properly or not at all.Seems this also happened with another model we had planned obsolescence. It was working fine, flashing due to low battery. Now, nothing from outside. Annoying. After it shows the temp then you can move it back to its location.The direct link is. Put the batteries in the remotes first. If you need to reset the units, pull the batteries from the indoor temperature sensor and the remotes for 10 minutes before restarting. With the remotes and indoor sensor 3 to 5 feet apart, put the batteries in the indoor temperature sensor. Then wait 10 minutes before pressing any buttons. Once you have confirmed communication between the units, then move the remotes to their final location not more than 330 feet away minus 30 feet for external walls or windows and 20 feet for each internal wall between the units. I hope this helps. Cindy Wells Try this Your main unit displays current, minimum, and maximum temperature and humidity readings collected by the remote sensor and main unit. Outdoor data is collected and displayed every 40 seconds and indoor data is collected and displayed every 10

seconds. <http://bamor.org/userfiles/comark-foodpro-plus-thermometer-manual.xml>

The red LED flashes whenever the sensor transmits an RF signal to the receiver. Each sensors data will be displayed for 3 seconds. Use a pointed subject to press RESET when you change the batteries and whenever the system malfunctions. Login to post I had to change the batteries on the outside device. The clock outside temp just flashes 63.5 all the time. How do I make it sync to the device outside Press one of the buttons on the weather station at least 20 times to clear all memory. Verify that the weather station is blank before proceeding there may be lines painted on the screen that will show when power is removed. Leave both units without power for 15 minutes very important. Insert fresh batteries into the clock. Insert fresh batteries into the outdoor sensor. Press the TX button on the outdoor sensor to transmit RF signal. Keep the outdoor sensor 510 feet from the forecast station. When RF connection is established, the temperature will appear on the station. Allow the outdoor sensor and weather station to sit together for 15 minutes to establish a strong connection. Allow time for unit to initialize and begin transmitting temp. You should see outdoor temperature displayed. Right now it is below freezing and my indoor unit is showing for outdoor temperature. Install replacement batteries in the outdoor unit. Back indoors, install replacement batteries in the indoor unit and wait for temperature to be displayed. If nothing happens, the outdoor unit may have failed. Remove all batteries from outdoor and indoor units. Install knowgood batteries in the outdoor unit. Allow time for the outdoor unit to begin transmitting data. Install knowgood batteries in the indoor unit. You should see the outdoor temperature displayed. Batteries good LED lights. Monitor shows indoor temp only. This will depend on the manufacturer. For some brands, you need to take the batteries out of both the indoor and outdoor units for 10 minutes.

Then put the batteries into the devices with both side by side working inside is easier. Wait until the outdoor data is displayed. There are some weather station systems where the outdoor unit isnt weatherproof. You may need to dry the outdoor unit for several days after removing the batteries before resynching it to indoor sensor. If the outdoor data isnt displayed when the two units are side by side and the reset procedure doesnt work. One device has an internal malfunction transmitter or receiver failed. Its probably best to replace the unit. If it is under warranty, contact the manufacturer. Cindy Wells Ive seen Davis Weather stations damaged by a close lightning strike. The outdoor unit had to be replaced. Went through half a dozen AAA batteries and wouldnt read. It was the indoor unit. Had the same bats I installed 3 years ago. DUH! Replaced the AAA, and all was well. When the inside batteries die out, it has just enough juice to read indoor temp, but not enough to sense exterior signal. From this site found solution search for Q My wireless weather station periodically beeps, why A. units ability to detect a foreign radio frequency of another wireless unit when that unit transmits a signal.. any wireless devices transmitting on a radio frequency have the potential to interfere with each other. Limit the amount of wireless devices to lesson the chance of interference. When beeping occurs, one device will need to be deactivated. I had the same problem, another external temp gauge showed up on the other channel, so my neighbor or someone is using the similar unit. MY SOLUTION opened back of case and cut black wire to piezo speaker at base if rear cover opposite side of standup prop that creates beep. Dont use any sound features, ALL good now. I had to change the batteries on the outside device. The clock outside temp just flashes 63.5 all the time. How do I make it sync to the device outside Answer questions, earn points and help others.

Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. Please try again later. Keith 5.0 out of 5 stars I bought two of these from Sams. I bought two of these from Sams club 6 years ago, and both are in perfect shape.

The ones I have have a black digits on a silver backplate. The frame of course is black like shown here. Yes, the clock takes 3 AA batteries, and I change it once in about 5 months. Adjust its time by itself, in relation to the atomic clock. Never had to reset time even once in 6 years. I wonder how the reviewer above lost time, because the clock constantly synchronizes itself to the atomic clock in Boulder, CO, which has an accuracy of plus or minus just 1 second in nearly 100 million years. Sometimes the RF frequency from the outside transmitter loses contact with the clocks frequency it has happened to me only twice in 6 years , and then the outside temp will not show. Simple solution to fix this is Take down the outside transmitter and the internally mounted clock. Remove batteries from both. Wait about 10 mts. First install batteries in the transmitter, then after about 30 seconds, install batteries in the clock. In about 5 mts, you will find the clock showing the external temp like before. And the temp sensor outside is very accurate too. Great product. After all, it is a 3M product. Though made in China, 3M has exercised superb quality control over the preoduct. I wish they make more of these, I would snap up two more. Please try again later. Please try again later. Chris U. 5.0 out of 5 stars In terms of the auto setting mechanisim.
